

## CONTENT

1 Square Coat Rack (size: small 510 x 395 mm)

1 hex key

3 assembly plugs

3 assembly screws (T25)

1 spare screw for the sockets

## ASSEMBLY

(required tools: power drill (6 mm drill pit), line and/or level, pencil or masking tape)

1. Adjust the rack to desired height (recommended height: bottom approx. 130 cm from floor).
2. See illustration below to ensure correct position
3. Mark the spot for the upper socket with pencil or masking tape
4. Slightly loosen the screws in the sockets to separate them from the rack
5. Drill a 40 mm deep hole (diameter 6 mm) for the upper assembly plug
6. Place the assembly plug into the hole and screw the upper socket on the wall
7. Place the rack into the upper socket on the wall
8. Use the line or level to make sure that the rack is straight and mark the spots for the two remaining sockets
9. Take the rack off the wall and screw the remaining sockets to the marked spots
10. Place the rack all the way into the sockets and tighten the screws in the sockets
11. Ensure that the rack is firmly attached
